

# IMC Community Survey

October 2009

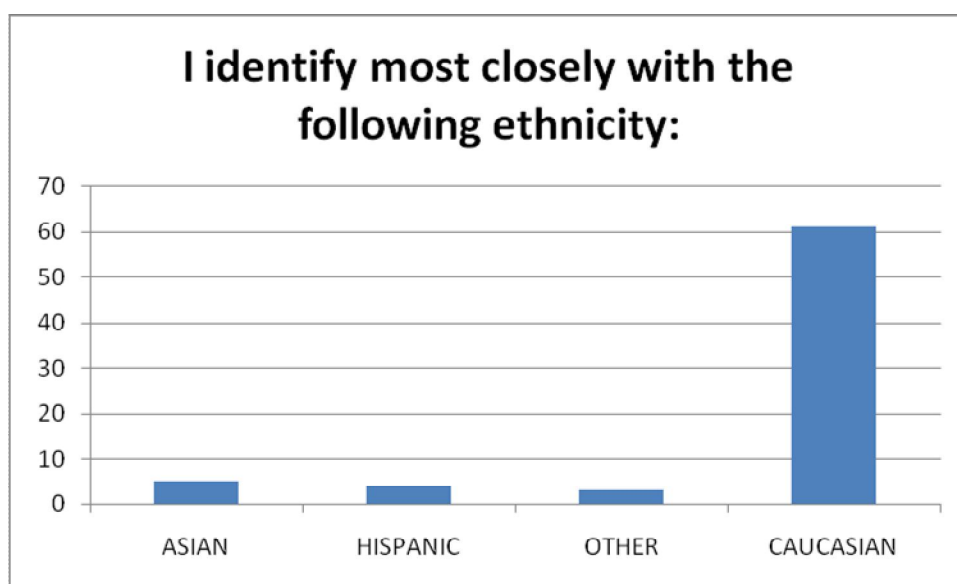

## Select Questions

Online-only respondents

(n = 80)

**Overall:** The online-only population is unusual in having more men than women, and it is generally a younger (30% under 35 years old) population than attends IMC in person. This group was naturally quite interested in more video options and online courses, but also in a more interactive sangha. We are just beginning to explore what it means to have a significant fraction of our sangha reside non-locally.

Results from select questions are shown.
